

MaxiPark The Car park Guidance system for Garages and Outdoor parking

MaxiPark Guides the visitors to the best possible available parking slot. This saves a lot of time and minimizes the pollution. It also creates happy customers who prefer to come back. The usage of the parking can be 100% instead of the 90-95% for the traditional parking systems. The system provides Reports and analyzes about how the parking slots and zones are used and gives the parking owner an opportunity to improve the efficiency and availability of the parking.

- Frequency of usage in different zones and individual parking slots.
- Average parking time.
- Usage and Trends of usage.
- Peaks during the days and peak days etc.
- Integration to People counting with reports and comparisons.
- Notification of Vehicles Exceeding Parking Limits

**Increasing Revenue. Reducing Pollution.
100% usage of the parking,
Improving the Customer Experience.**

A real guidance system must show the availability in the main directions and give a priority to the driver. MaxiPark has this functionality and it gives the visitors satisfaction. **A satisfied customer buys more and comes back.**

The system design allows very **quick and low cost installation** and it is **just plug and play**.

It is built on **highly reliable industrial standard** technology which means **minimum down time** and long life time. It enables integration to other systems and control of peripherals. (e.g. BMS)

Software and Reporting:

All information is stored time stamped in a **SQL database**. Special reports can be set up by the user and connected to automated email at any time and to any person.

The server is connected to internet for service and support from the supplier as well as **automated System status reporting** to the supplier. This keeps the system working without any interrupt. The Server shows a graphic map of the garage with all information of the parking slot status.

All control, history read out and simulation is supported. This lets you understand your parking in order to make improvements.

Outdoor Parking

MaxiPark works also outdoor. Inductive loops indicate presence of vehicles while strong color LEDs show from long distance if a free parking slot is available. The lamps will used as normal lights when they are not guiding. This means that the extra cost is low.

MP-LoopPlate is mounted on or in the ground on each parking slot

MP-PostLED is mounted and serving 6 to 16 parking slots.

Inductive loop plate

Up to 120 loop plates are connected through one cable, which makes the installation cost low
